

Simple News App

Task Overview:

Develop a simple News iOS application, inspired by the attached UI design. The app should be compatible with iPhone and iPad. The application should fetch and display news articles from the [Spaceflight News API](#). The application should include the following features:

News Feed Screen: Display a list of news articles. It is good, if you implement pagination, pull to refresh.

Detail Screen: Show detailed information of a selected News article.

APIs to implement

Api Documentation Link: <https://api.spaceflightnewsapi.net/v4/docs/>

Articles Feed / List - <https://api.spaceflightnewsapi.net/v4/articles/>

Search - https://api.spaceflightnewsapi.net/v4/articles/?title_contains=cricket

Article Details - <https://api.spaceflightnewsapi.net/v4/articles/{id}>

NOTE:

In the attached UI, some of the data may not be available in the API. So, consider the given UI as a reference and not the exact design. You can design your own UI.

Features to Implement

A. List Screen

Search: Allow users to search for articles by title or summary.

Pagination: Implement pagination to load more news articles as the user scrolls down.

Pull to Refresh: Enable users to refresh the news list by pulling it down.

B. Detail Screen:

Display the full content of the selected news article.

Show additional article details such as the publish date.

Swipe Navigation: Like Gmail, allows users to swipe left to show the previous news article and swipe right to show the next news article in the list. Reference:

Evaluation Criteria:

Code Quality: Ensure clean, readable, and maintainable code following iOS best practices.

Framework: You can use UIKit or SwiftUI. We will evaluate the approaches and standards.

DRY Principle: Avoid redundant code and ensure reusability.

Design Patterns: Utilize the MVVM design pattern to ensure a scalable and modular codebase.

UI/UX: Closely match the provided design and ensure a good user experience.

Functionality: Implement all specified features correctly and ensure they work as expected.

Navigation: Navigation between the list screen and detail screen should be smooth.

Scenarios: Consider this as a production release app and handle all scenarios effectively.
